PROFESSIONAL SUMMARY

DevOps engineer with hands-on experience provisioning and maintaining AWS cloud infrastructure with Terraform (IaC), building and operating CI/CD pipelines, and developing full-stack applications in Python, TypeScript/JavaScript, Go, and React. Experienced with Docker and Kubernetes deployments, PostgreSQL relational database design, and observability with Dynatrace, including log management, performance monitoring, and incident analysis. Proven ability to own end-to-end application and infrastructure lifecycles, build AI-powered platforms, and collaborate clearly across engineering, product, and operations teams. Eager to apply cloud, automation, and AI skills to products that create positive social impact.

TECHNICAL SKILLS

Languages: Python, Go (Golang), TypeScript, JavaScript, SQL, Shell/Bash, HTML5, CSS

Cloud & Infrastructure: AWS, Azure, Terraform (IaC), Serverless Computing, Linux, UNIX, Windows

DevOps & CI/CD: Jenkins, GitHub, Docker, Kubernetes, Terraform, YAML, CI/CD Pipelines

Databases & ETL: PostgreSQL, MySQL, MongoDB, Memurai (Redis) (relational design, ETL pipelines, caching layers)

Monitoring & Observability: Dynatrace, Log Management, Performance Monitoring, Distributed Tracing

Backend & Architecture: Node.js, Microservices, Distributed Systems, REST APIs, FastAPI, PM2, Authentication & Authorization

AI / ML & Generative AI: LLM Integration, Hugging Face Transformers, NLP Pipelines, Generative AI, FastAPI ML Services

Frontend & Portals: React, Backstage Developer Portal, jQuery

Methodologies: Agile/Scrum, SDLC, Sprint Planning, Unit & Functional Testing, Production Support, Documentation

EXPERIENCE

DevOps Engineer Intern | GE Vernova • Norfolk, VA | 05/2025 – Present

Agent: Intelligent DevOps Assistant (Microsoft Teams)

- Architected and delivered a TypeScript-based, multi-stage AI pipeline embedded in Microsoft Teams that gives engineers a conversational interface to release pipelines, monitoring platforms, access management, and operational runbooks, eliminating context-switching on release day.
- Built a hybrid decision engine with intent classification and routing safeguards for high-risk operations, executing live API tool calls against Digital.ai Release/Deploy, Jenkins, GitHub, and Dynatrace.
- Developed a centralized Node.js microservice with REST APIs, structured logging, exception handling, and PM2 load balancing for production-grade reliability and scalability.
- Integrated LLM-powered FastAPI (Python) components enabling intelligent incident analysis and automated remediation workflows, reducing cognitive overhead during release operations and incident response.
- Designed and maintained PostgreSQL databases for authentication tokens, audit logs, and application metadata; implemented Memurai (Redis-compatible) caching for low-latency token management.

Backstage Developer Portal: Unified CI/CD Visibility & Developer Experience

- Designed and built a centralized Backstage developer portal (React/TypeScript) consolidating the full software delivery pipeline into one interface, removing the need to switch between GitHub, Jenkins, and Digital.ai to track a release.
- Implemented end-to-end pipeline visibility: a GitHub pull request triggers a Jenkins build that, on passing checks, initiates a release with every stage observable directly in Backstage.
- Developed custom Backstage plugins integrating GitHub, Jenkins, Digital.ai, and Dynatrace so developers can view build status, deployment progress, and monitoring alerts in one place.
- Collaborated in Agile/Scrum ceremonies across sprint planning, design, and product meetings, communicating technical trade-offs clearly across a multi-team enterprise organization.

Graduate Research Assistant | Old Dominion University • Norfolk, VA | 06/2024 – 05/2025

- Designed and deployed Python-based ML service pipelines for anomaly detection and data validation across large-scale healthcare datasets, applying ETL patterns for scalable inference workflows.

- Implemented Generative AI and NLP models using Hugging Face Transformers to analyze structured and unstructured clinical data, identifying mislabeled and inconsistent records in multimodal datasets.
- Built and operationalized REST APIs for ML inference services, enabling integration with downstream data consumers and validation pipelines at scale.

Associate Software Engineer | DXC Technology • India | 12/2021 – 07/2023

- Owned end-to-end CI/CD pipelines with Jenkins for enterprise applications in JavaScript, TypeScript, and Python; containerized applications with Docker and managed Kubernetes deployments.
- Automated infrastructure provisioning with Terraform across AWS environments, improving consistency and reducing manual effort; supported on-premises-to-cloud integrations across enterprise systems.
- Developed and maintained REST API integrations and microservice components; performed root-cause analysis and delivered timely fixes for production incidents in distributed environments.
- Wrote documentation and operational runbooks, contributed to knowledge sharing, and participated in Agile/Scrum ceremonies from sprint planning through release support.

Engineering Intern | Appleton Technologies • India | 05/2020 – 04/2021

- Supported deployment of cloud-hosted web applications on Linux servers; assisted with Jenkins CI/CD pipeline setup and wrote Python and Shell automation scripts for routine operational tasks.
- Configured Nginx and Apache web servers; gained hands-on exposure to cloud networking (DNS, load balancing, firewall rules) and supported cloud storage and backup workflows.

EDUCATION

Master of Science, Computer Science | Old Dominion University, Norfolk, VA • 05/2025

B.E., Electronics and Communication Engineering | Matrusri Engineering College • 08/2021
